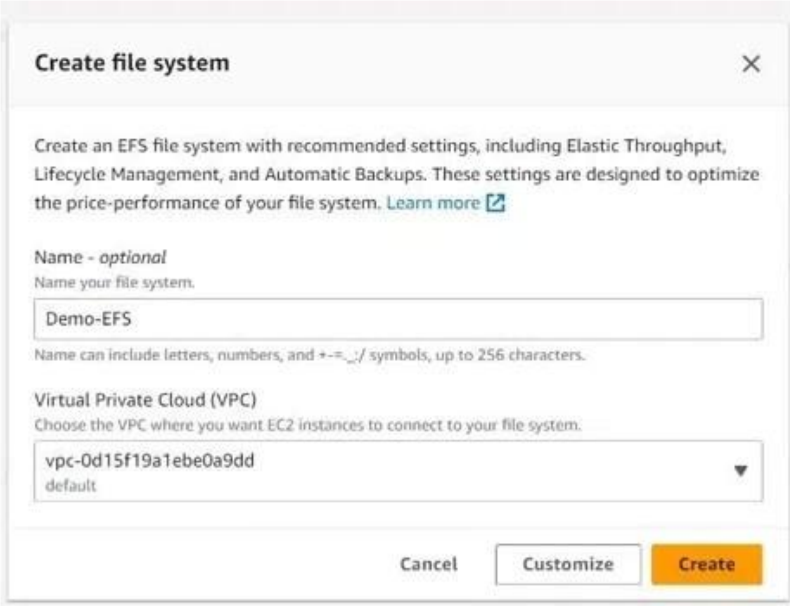
Configuring Amazon EFS

Here is the detailed procedure to set up Amazon EFS and connect it to your EC2 instances.

Step 1: Create Amazon EFS

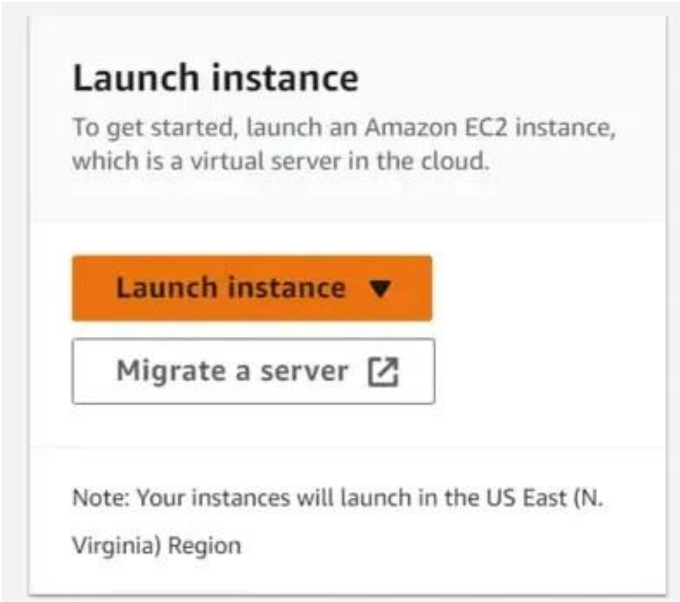
Launch the AWS Management Console, navigate to EFS, click "Create file system", and select the target VPC.



Creating a File System in the AWS Console

Step 2: Launch EC2 Instances

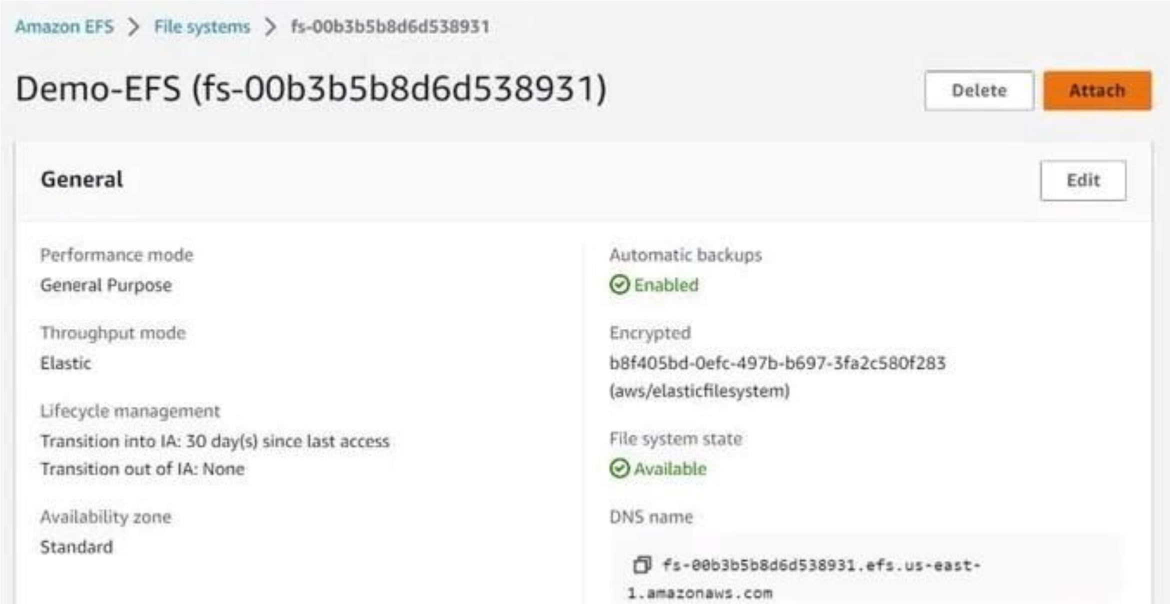
Create one or more EC2 instances in the same VPC to mount the EFS file system.



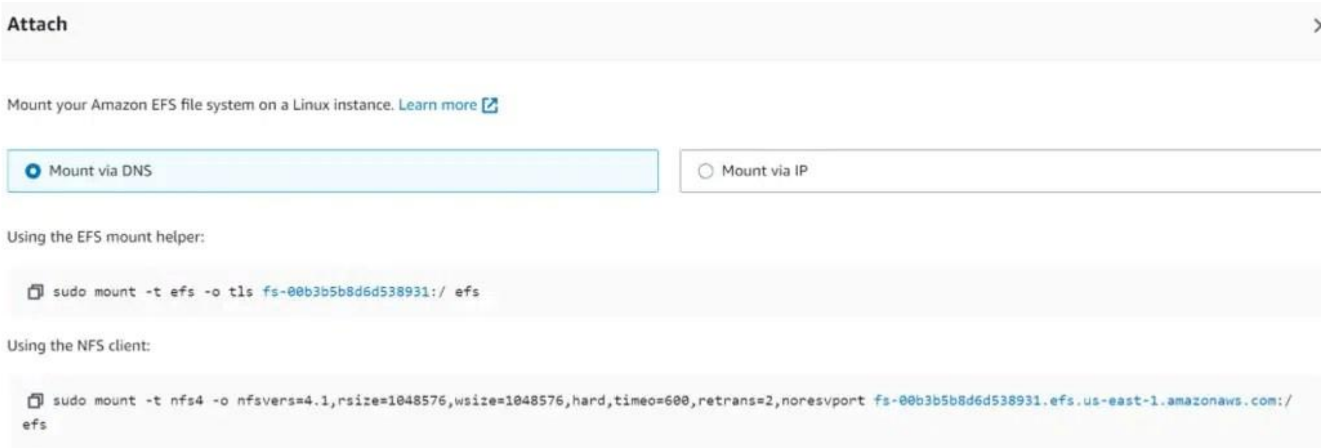
Configuring an EC2 Instance on AWS

Step 3: Allow EFS Access and Mount

Update the Security Group of the EFS to allow inbound traffic on port 2049 from the EC2 instance's Security Group.



Modifying Security Group Inbound Rules



Attaching EFS using the Mount Helper

After successful mounting, you can manage files across your fleet effortlessly.
